

# Carbon Border Adjustment Mechanism – downstream extension, additional anti-circumvention measures and rules for the electricity sector

## Introduction

---

The EU's Carbon Border Adjustment Mechanism (CBAM) is the EU's tool to put a fair price on the carbon emitted during the production of carbon intensive goods that enter the EU, and to encourage cleaner industrial production in non-EU countries. It aims to prevent carbon leakage, which occurs if, for reasons of costs related to climate policies, businesses in certain industry sectors or subsectors transfer production to other countries or imports from those countries replace equivalent products that are less intensive in terms of greenhouse gas emissions.

CBAM targets the embedded carbon emissions of products imported into the EU in specific sectors that are within the scope of the EU Emissions Trading System (ETS) and the most at risk of carbon leakage. These are: cement, iron and steel, aluminium, fertilisers, hydrogen and electricity. The instrument ensures that imports of these goods face a carbon cost, mirroring the carbon price paid by domestic producers of the same goods under the EU ETS. This helps safeguard the EU's climate objectives and contributes to lower global greenhouse gas emissions overall.

To help prevent carbon leakage, Art. 30 of the CBAM Regulation ([Regulation \(EU\) 2023/956](#)) sets out a possible extension of CBAM's scope to products downstream from goods currently in scope. The recently adopted Commission's [Steel and Metals Action Plan](#) (March 2025) further highlights these aspects.

Firstly, carbon leakage in CBAM-covered goods could shift further **downstream** in the value chain, i.e., to goods that use CBAM-covered goods as inputs. This could arise if companies downstream to CBAM goods that currently produce in the EU move their manufacturing and processing operations to non-EU countries with laxer climate policies or if end consumers purchase downstream products that are less expensive because of less stringent climate policies in the producing country. In addition, companies may try to avoid CBAM by making enough minor transformations to the CBAM basic goods outside the EU to not be subject to CBAM anymore, and then importing the slightly altered downstream products without having to pay the CBAM financial adjustment at the EU border.

Secondly, there is a risk of **circumvention** of CBAM arising from practices aiming to reduce the amount of financial liabilities associated with the embedded emissions. In addition to the practices highlighted above, there is also a risk of resource shuffling whereby goods produced in low-carbon production facilities in non-

EU countries are redirected to European customers while high-carbon sales continue or even increase in non-EU markets, thereby undermining CBAM's environmental effectiveness and benefiting producers who can reallocate clean and less clean production between the EU market and non-EU markets.

In view of these considerations, in the Steel and Metals Action Plan the Commission committed to presenting a legislative proposal by the end of 2025, extending the scope of CBAM to certain steel and aluminium-intensive downstream products and including additional anti-circumvention measures. The selection of downstream products to be added to the CBAM scope would rely on analogous criteria to those that guided the initial scope of CBAM, namely the risk of carbon leakage which depends on the tradability and the carbon cost, the relevance of embedded emissions and the technical feasibility.

Furthermore, in light of the lessons learned in the transitional period, the rules for **electricity** have been identified as very difficult to implement due to the specific characteristics of electricity as a good. Currently, the default values applied are based on the emission factor of fossil electricity production. Alternatively, actual emissions can be reported. Yet, the conditions are very difficult to meet. This design might impede incentives for decarbonisation in non-EU countries and thereby reduce the effectiveness of CBAM.

This consultation aims at gathering the opinions of all stakeholders on these issues with a view to an amendment of the CBAM Regulation.

## Definitions

---

- **CBAM basic goods** are goods covered by CBAM in six sectors: aluminium, cement, electricity, fertilisers, hydrogen, and iron & steel. They are listed in Annex I of the CBAM Regulation, Regulation (EU) 2023/956.
- **Downstream goods** are products further down the value chain from CBAM basic goods. In this survey, the CBAM good electricity is not considered an input for determining downstream goods.
- **Carbon leakage** occurs if, for reasons of costs related to climate policies, businesses in certain industry sectors or subsectors transfer production to other countries or imports from those countries replace equivalent products that are less intensive in terms of greenhouse gas emissions.
- **Downstream carbon leakage** could arise if companies downstream to CBAM goods that currently produce in the EU move their manufacturing and processing operations to non-EU countries with laxer climate policies or if end consumers purchase downstream products that are less expensive because of less stringent climate policies in the producing country.
- **Circumvention** is understood to arise from any practices for which there is insufficient due cause or economic justification, other than to effectively avoid, wholly or partially, the financial liabilities arising from CBAM, undermining the environmental integrity of the mechanism.
- **Resource shuffling** is the risk that goods produced in low-carbon production facilities in non-EU countries are redirected to EU customers while carbon-intensive production continues for other markets.
- **Importer** means either the person lodging a customs declaration for release for free circulation of goods in its own name and on its own behalf or, where the customs declaration is lodged by an indirect customs representative in accordance with Article 18 of [Regulation \(EU\) No 952/2013](#), the person on whose behalf such a declaration is lodged (Article 2(15) CBAM Regulation).
- **Customs representative** means any person appointed by another person to carry out the acts and formalities required under the customs legislation in their dealings with customs authorities (Article 5 (6) [Union Customs Code](#)).

- **Transmission system operator (TSO)** means a natural or legal person who is responsible for operating, ensuring the maintenance of and, if necessary, developing the transmission system in a given area and, where applicable, its interconnections with other systems, and for ensuring the long-term ability of the system to meet reasonable demands for the transmission of electricity (Art. 2(35) [Directive on internal market for electricity](#)).
- **Capacity nomination** means the notification of the use of long-term cross-zonal capacity by a physical transmission rights (PTRs) holder and its counterparty to the respective Transmission System Operators (TSOs) (Article 2(7) [Commission Regulation \(EU\) 2016/1719](#)).
- **Power purchase agreement** means a contract under which a person agrees to purchase electricity directly from an electricity producer (point 1(f) Annex IV CBAM Regulation).
- **Physical network congestion** means any network situation where forecasted or realised power flows violate the thermal limits of the elements of the grid and voltage stability or the angle stability limits of the power system (Article 2, point (18) [Commission Regulation \(EU\) 2015/1222](#)).

30 For downstream goods, if and when they become part of the CBAM scope, how do you estimate the cost of the following CBAM reporting requirements in the CBAM definitive phase?

	Very low cost	Low cost	Moderate cost	High cost	Very high cost	No opinion

* a. Determining the content of CBAM basic good(s) in the downstream good(s), e.g., 'made of 70% steel CN 7210 49 00 and 5% aluminium CN 7606 11 91'	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
* b. Determining embedded emissions covered per tonne of CBAM basic good input	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
* c. Determining the country of origin per CBAM basic good	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
* d. Determining the carbon price already paid abroad per CBAM basic good	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
* e. Preparing for the verification of monitored emissions	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

## Questions on the risk of circumvention and resource shuffling

[Note, some questions only appear based on the answers you give]

\* 31 Do you think that under the current CBAM, there is a risk of circumvention that can hinder its effectiveness?

- ☐ Strongly agree
- ☐ Agree
- ☐ Neutral
- ☐ Disagree
- ☐ Strongly disagree
- ☐ No opinion

\* 34 For some CBAM basic goods, the embedded emissions can vary widely within the same CN code, depending on the composition of the goods or the production technology. Do you think that this leads to a possible circumvention risk?

- ☐ Strongly agree
- ☐ Agree

- ☐ Neutral
- ☐ Disagree
- ☐ Strongly disagree
- ☐ No opinion

\* 36 Do you think that there is a risk of resource shuffling where non-EU producers of CBAM basic goods may not increase low-emission production capacity but instead reallocate existing clean production to export to the EU, while selling their high-emission CBAM products elsewhere?

- ☐ Strongly agree
- ☐ Agree
- ☐ Neutral
- ☐ Disagree
- ☐ Strongly disagree
- ☐ No opinion

## Questions on the application of CBAM to electricity as a good

[Note, some questions only appear based on the answers you give]

### Default Values

\* 39 Do you think that the current default values based on the CO<sub>2</sub> emission factor (average of the electricity produced from fossil fuels) are adequate to achieve the CBAM objectives (prevention of carbon leakage, incentivisation of decarbonisation of non-EU production)

- ☐ Strongly agree
- ☐ Agree
- ☐ Neutral
- ☐ Disagree
- ☐ Strongly disagree
- ☐ No opinion

### Actual Emissions

\* 41 Do you think that the conditions for relying on actual emissions need to be amended?

- ☐ Strongly agree
- ☐ Agree
- ☐ Neutral
- ☐ Disagree
- ☐ Strongly disagree
- ☐ No opinion

## Administration

\* 44 How do you procure electricity abroad?

- ☐ a. I / My company purchase(s) electricity via exchanges in non-EU countries
- ☐ b. I / My company conduct(s) bilateral contracts with generators of electricity in non-EU countries
- ☐ c. Other
- ☐ No opinion

\* 46 Who submits the customs declaration for your electricity imports?

- ☐ a. I / My company submit(s) the customs declaration
- ☐ b. A customs representative submits the customs declaration
- ☐ c. The TSO submits the customs declaration as importer
- ☐ d. Other
- ☐ No opinion

\* 48 Which sources do you rely on to report the imported quantities?

- ☐ a. TSO
- ☐ b. Records of electricity purchases in non-EU countries
- ☐ c. Other
- ☐ No opinion

\* 50 Who is the CBAM declarant for your electricity imports?

- ☐ a. I am / My company is the declarant
- ☐ b. An indirect customs representative is the declarant
- ☐ c. TSO as importer is the declarant
- ☐ d. Other

☐ No opinion

\* 52 How do you identify the non-preferential Country of Origin?

- ☐ a. Via records of my electricity purchases in non-EU countries (PPA, etc.)
- ☐ b. I indicate the country where I purchased the electricity
- ☐ c. I indicate the country from where the electricity was imported into the EU
- ☐ d. Other
- ☐ No opinion
